Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-34 and 71 drawn to a process for producing a biological product with a microorganism under aerobic conditions, classified in Class 435, subclass 818, for example.

II. Claim 35-70 drawn to a process for producing a biological product with a microorganism under anaerobic conditions, classified in Class 435, subclass 303.2, for example.

Each of groups I and II is directed to separate and distinct inventions. The method of Group I is directed to a cultivation process under aerobic conditions, while Group II is directed to a cultivation process under anaerobic conditions. These methods are distinct both physically and functionally, require different microorganisms, process steps and produce substantially different products.

The several inventions above are independent and distinct, each from the other. They have acquired a separate status in the art as a separate subject for inventive effect and require independent searches (as indicated by the different classification). The search for each of the above inventions is not co-extensive particularly with regard to the literature search. Further, a reference which would anticipate the invention of Group I would not necessarily anticipate or make obvious the other group.

For these reasons restriction for examination purposes is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 C.F.R. § 1.48(b) and by the fee required under 37 C.F.R. § 1.17(h).
